Piaggio P-180 Avanti

by

Rotorcraft Simulations

for Microsoft Flight Simulator X

Eagle Rotorcraft Simulations presents to you, the Piaggio P-180 Avanti, originally designed by Mario Noriega, now converted to a native FSX model. Designed in GMax, the P-180 features self-shadowing, 11 reflective texture sets from the FS2004 release, specular mapping, bump mapping, lightmaps, a custom sound suite, and more. This add-on was designed for use with FSX Acceleration only; Tested in Windows Vista and Windows 7 under DX10 Preview with no issues. The P-180 was released with kind permission from Mario Noriega.

Installation

1.) Unzip this download to a temporary location.

2.) Run **ersP180install.exe** and follow the instructions through installation.

4.) Done, now go flying!!!!
